

Capstone Project Instructions

1. Projects are individual projects.
2. Marks Distribution: Report (30) + Programming (70) [Tentative]
3. Partial marks will be given if a participant is unable to complete the code provided the report is in sync with the code.
4. Although we suggest proper modularity in the code as per general coding standard but marks will be given based on the approach and algorithms.
5. All the projects must use at least two LLMs. Choice of the models must be properly justified.
6. You must use the directory structure given in Capstone_Project-CS.zip file to submit the project.
 - a. Keep report in the **Report** directory in **pdf** format.
 - b. Keep the code(s) in **Codebase** directory in **py** format.
 - c. Do not share the output/input data.
 - d. Replace the ID in the folder name 'Capstone_Project-CS[**ID**]' with the appropriate project ID. Please find your corresponding project ID below (Point 9).
7. Specific instructions related to Report:
 - a. Report template is shared in MS word (*docx*) format.
 - b. You should change the Title and Sub-Titles and contents as per your requirement.
 - c. Report should not exceed 3 Pages considering minimum text font size 12.
 - d. Save the final report as PDF in the Report directory. (**Note only PDF report will be evaluated**)
8. Specific instructions related to Programming:
 - a. **Should have *main.py*** that starts the code (**code without *main.py* will not be evaluated**).
 - b. Upload execution syntax in a text file (*execution.txt* example is shared).
 - c. You must provide proper comments in the code. We advise you on providing comments on each and every function and wherever possible in the code to allow for proper evaluation and avoid confusions.
 - d. Do not upload additional files other than the required python codes.
 - e. Try to keep the code(s) in the same directory (avoiding sub-directory if possible) so that all the files and data can be accessed using ("./").
 - f. You can use single or multiple python files as per your requirement.
 - g. Your code needs to be executable in a terminal environment without requiring any GUI/front-end.
 - h. You can use API/local models that are paid/free/open-source as per your choice.
 - i. If using any API key, then it should be provided as a parameter to *main.py* or can be fetched from the environment itself. You should not share the API key within the code for safety reasons.
 - j. The project objective and guidelines are for helping you but you are not required to be strictly followed to select the models/packages. You can use any alternate model/package as per availability.
 - k. You are free to use any approach as long as it is logically correct and solves the problem

of your objective.

- l. You can execute your code in Terminal or Notebooks - Kaggle/Collab etc. but the final code should be in '.py' only. FYI, you can easily run '.py' file in Collab or Kaggle, so local system limitation should not be an issue.
- m. You have to keep the data and program files in the directory provided. Then finally zip and upload the entire directory. Uploading in GitHub/Google Drive is not accepted.
- n. You are advised to define the project objectives and approach with the limited instructions provided. Your approach may differ from the instructions but should solve the problem.

9. Specific instructions related to project objectives:

- a. CV Creation using LLMs (CS[01])
 - i. Input: Sample unstructured user profile data
 - ii. Output: Final CVs from the input files
- b. CV Sorting using LLMs (CS[02])
 - i. Input: CVs and Job-description.
 - ii. Output: Ranked list of CVs.
- c. Advertisement Creator - Using Image Generation (CS[03])
 - i. Input: Advertisement Text and Image Advertisement Template.
 - ii. Output: Final Advertisements.
- d. Multimodal Medical Assistant (CS[04])
 - i. Input: Medical Images corresponding to Text Prescriptions/Patient Details.
 - ii. Output: Conversation.
- e. Sports Commentator from Video (CS[05])
 - i. Input: Video without commentary.
 - ii. Output: Commentary text with time-line information from the test video.

Note: You can post your queries in the Capstone Discussion Forum
OR

E-Mail directly to intern2@ai4icps.in with the subject as **Capstone Query** **

Please avoid sending duplicate queries.

** E-Mail with other subject names may not be considered.

Capstone Submission Deadline: 08 October 2026 23:59 IST
